PROJECT

ULTRAS - E-Commerce Website

- Technologies Used: Django (Python), MySQL

Description:

- Developed a fully-functional e-commerce website using Django, a high-level Python web framework, ensuring a robust and scalable backend architecture. Integrated MySQL as the primary database to manage and store user data, product inventory, and transaction records efficiently.

Key Contributions:

- Implemented user authentication and authorization mechanisms to secure user accounts.
- Designed and developed database schemas in MySQL, optimizing for performance and scalability.
- Integrated a reliable payment gateway, enabling seamless and secure online transactions.
- Developed key features including product listing, shopping cart, order management, and user reviews.
- Ensured responsive design and user-friendly interface for optimal user experience across various devices.
